LA STORIA DELLA NOSTRA AZIENDA

THE HISTORY OF OUR COMPANY - L'HISTOIRE DE NOTRE ENTREPRISE

Con oltre 40 anni di esperienza nella lavorazione dell'ottone, la nostra azienda è collocata nel comune di San Maurizio d'Opaglio (NO) a ridosso del Lago d'Orta, una piccola perla incastonata in un territorio ricco dal punto di vista industriale e naturalistico.

La grande conoscenza dei materiali, le tecnologie più avanzate di cui la nostra azienda dispone e soprattutto la voglia di circondarci di oggetti importanti, ci hanno portato alla creazione dei prodotti presentati in questo catalogo, esclusivi, originali, assolutamente "made in Italy".

La lavorazione dell'ottone e dell'acciaio avviene completamente all'interno del nostro laboratorio, utilizzando attrezzature di ultima generazione per la fresatura e la tornitura dei pezzi, per i quali partiamo da barre piene.

Estrema è l'attenzione rivolta alla scelta dei materiali, quali l'ottone e l'acciaio nelle varie tipologie e a tutti gli elementi accessori, per offrire alla nostra clientela prodotti di grande qualità.

With over 40 years of experience of brass workmanship, our company is located in Italy in the town of San Maurizio d'Opaglio (Novara) Italy, overseeing the Orta Lake, a little pearl in a territory rich of industry and nature.

The great knowledge of the materials, the most advanced technologies available in our factory and over all the desire of surrounding ourselves with important products, has allowed us to create the exclusive and original products presented in our catalogue and made in Italy.

The working of brass and steel takes place entirely in our workshop using the latest generation equipment for milling and turning of pieces for which we start from a full bar.

Extreme attention is given to the selection of the materials, like brass and steel in all its various types, and to all the accessory elements, which give us the chance to offer our clients great quality products.

Fort de plus de 40 ans d'expérience dans la transformation du laiton, notre usine est située dans la municipalité de San Maurizio d'Opaglio (NO) à côté du Lac d'Orta, une petite perle coincée dans un territoire riche sur le plan industriel et naturaliste.

La grande connaissance des matériaux, les technologies les plus avancées dont notre usine dispose et surtout l'envie de s'entourer d'objets importants, nous ont menés à la création de produits présentés dans ce catalogue, exclusifs, originaux, totalement «Made in Italy».

La transformation du laiton et de l'acier est complètement à l'intérieur de notre laboratoire, en utilisant des équipements de dernière génération pour le fraisage et le tournage des pièces, pour lesquels nous partons de la barre en laiton pleine.

Beaucoup d'attention est adressée au choix des matériaux, comme le laiton et l'acier dans les différentes typologies et à tous les éléments accessoires, pour garantir à notre clientèle des produits de très haute qualité.

IN GENIUS[®]

Pratico, semplice, geniale!

Practical, simple, ingenious!
Pratique, simple, ingénieux!

L'Attacco rapido acqua a muro universale **IN GENIUS** dotato di valvola interna con tenuta fino a 700 bar.

I VANTAGGI:

- Consente l'innesto ed il disinnesto istantaneo di tutti gli utilizzi idrici;
- Impianto idraulico sempre disponibile in pressione, evita le perdite di tempo per continui svuotamenti e riempimenti;
- Facilita le operazioni di test;
- Elimina i tappi di chiusura in fase di cantiere;
- Rosone di finitura posizionabile dopo il montaggio dell'attacco a Muro.

Universal wall bracket **IN GENIUS** with internal valve sealing tested up to 700 bar.

THE ADVANTAGES:

- *Quick connection / disconnection of all water uses;*
- *The system is always in pressure (no waste of time caused by repeated emptying and filling);*
- *Quick coupling and disconnection for the test activities;*
- *No plugs are needed during the installation phase;*
- *Finishing rosette to be positioned after the installation of the wall fittings, with the associated benefits.*

La prise murale universelle **IN GENIUS** dispose d'un clapet interne avec étanchéité jusqu'à plus de 700 BAR.

AVANTAGES:

- Permet la connexion et la déconnexion rapide de toutes les fonctions liées à l'eau;
- Le système est toujours sous pression (pas de perte de temps causée par la vidange et les remplissages répétés);
- Facilite les test;
- Aucun bouchon n'est nécessaire pendant la phase de chantier et de montage;
- La rosace de finition peut être placée après l'installation du raccord au mur, avec les avantages associés **IN GENIUS**

Il primo ed unico sistema al mondo che rivoluziona l'utilizzo dell'acqua

Sistema inGENIUS® è una **innovativa tecnologia** brevettata da SG, realizzata grazie all'esperienza pluridecennale nella progettazione e realizzazione di componenti per l'idraulica nell'edilizia residenziale.

inGENIUS® quindi è la valvola che, grazie all'aggancio e lo sgancio rapido dei punti acqua, permette a chi realizza impianti di **velocizzare le operazioni di installazione e collaudo in pressione**, evitando il montaggio dei tappi provvisori e **lo svuotamento** durante l'installazione di sanitari e rubinetteria.

Questo sistema di innesto universale si apprezza anche **in caso di perdite d'acqua** dai rubinetti o dai flessibili, in attesa della riparazione è sufficiente staccare l'innesto e l'acqua automaticamente si ferma lasciando l'impianto in pressione e perfettamente utilizzabile.

The first and only system in the world that revolutionizes the use of water

The inGENIUS system is an innovative technology patented by SG, created thanks to decades of experience in the design and manufacture of components for plumbing in residential buildings.

inGENIUS is the valve that, with the quick coupling and release of the water points, allows those who make plumbing systems to speed up installation and pressure testing operations, avoiding the assembly of temporary "plug for test facility" and the emptying of the system during installation of sanitary ware and taps.

This universal coupling system is also appreciated in the event of water leaks from the taps or connection hoses, while waiting for the repair it is sufficient to disconnect the coupling and the water automatically stops leaving the system in pressure and perfectly usable.

Le premier et seul système au monde qui révolutionne l'utilisation de l'eau

Le système inGENIUS est une technologie innovante brevetée par SG, créée grâce à des décennies d'expérience dans la conception et la fabrication de composants pour la plomberie dans les bâtiments résidentiels.

inGENIUS est la vanne qui, avec **arrêt instantané de l'eau pour une déconnexion rapide** de son raccord, permet à ceux qui fabriquent des systèmes de plomberie pour **accélérer les opérations d'installation** et de test de pression, en évitant le montage d'un **"bouchon pour banc d'essai"** temporaire et la **vidange du système** lors de l'installation de sanitaires et robinetterie.

Ce système de raccord universel est également apprécié en cas de **fuites d'eau au niveau des robinets** ou des durites de raccordement, en attendant la réparation, il suffit de débrancher le raccord et l'eau cesse automatiquement de sortir du système en pression et parfaitement utilisable.

There will no longer be ONLY electrical sockets in our homes!

Nelle nostre case non ci saranno più SOLO placchette elettriche!

CHANGE THE WAY YOU THINK ABOUT WATER

Nelle nostre case non ci saranno più SOLO placchette elettriche!

IT Sistema inGENIUS introduce un concetto innovativo che rivoluziona il modo di concepire gli impianti idraulici.

Grazie all'adozione dello sgancio rapido, il controllo del flusso d'acqua diventa un'operazione intuitiva e veloce, simile all'uso di un interruttore in un impianto elettrico.

Questa soluzione non solo semplifica la gestione dell'acqua, ma trasforma radicalmente il paradigma tradizionale dell'impianto idraulico.

La nostra visione è quella di offrire un'esperienza all'utilizzatore più efficiente e moderna, ridefinendo il modo in cui ci rapportiamo e interagiamo con gli impianti idraulici.

EN The inGENIUS system introduces an innovative concept that could revolutionise the way plumbing systems are conceived.

Thanks to the adoption of quick disconnect, controlling water flow becomes an intuitive and fast operation, similar to using a switch in an electrical system.

This solution not only simplifies water management, but also radically transforms the traditional plumbing paradigm.

Our vision is to offer a more efficient and modern user experience, redefining the way we relate and interact with plumbing systems.

FR Le système inGENIUS introduit un concept innovant qui pourrait révolutionner la façon dont les systèmes de plomberie sont conçus.

Grâce à l'adoption d'un système de déconnexion rapide, le contrôle du débit d'eau devient une opération intuitive et rapide, similaire à l'utilisation d'un interrupteur dans un système électrique.

Cette solution ne simplifie pas seulement la gestion de l'eau, mais transforme aussi radicalement le paradigme traditionnel de la plomberie.

Notre vision est d'offrir une expérience utilisateur plus efficace et plus moderne, en redéfinissant la façon dont nous sommes en relation et interagissons avec les systèmes de plomberie.

SICURACQUA

IT L'attenzione sull'ambiente bagno ad eventuali allagamenti o perdite d'acqua inaspettate è lo scopo principale del nostro sistema.

Le nostre prese SICURACQUA sono nate per salvaguardare la vita dei flessibili doccia (non adatti a rimanere in pressione).

L'obbligo della chiusura dell'acqua dopo l'utilizzo con un concetto di movimento naturale per riposizionare la doccetta nel supporto garantisce la tranquillità di un sistema sicuro

EN The main purpose of our system is the attention to the flooding or unexpected leakage of water in the bathroom environment.

Our SAFETY CLOSURE water supply is born to safeguard the shower hose life (they are not right remain in pressure).

The water closure obligation after use and the replacement of the handshower into the holder with a natural movement, is a guarantee of a security system.

FR Le but principal de notre système est de faire attention aux inondations ou aux fuites d'eau inattendues dans l'environnement de la salle de bain.

Notre alimentation en eau SICURACQUA est née pour sauvegarder la durée de vie des tuyaux de douchette (ils ne doivent pas rester sous pression).

L'obligation de fermeture de l'eau après utilisation et le remplacement de la douchette dans le support avec un mouvement naturel, est une garantie d'un système de sécurité.

01

Posizionando la doccetta nel supporto della presa l'acqua è chiusa

When the handshower is in the shower holder the water is closed

Lorsque la douchette est dans le support de douche, l'eau est fermée.

02

Estrarre la doccia e ruotare il supporto come un normale rubinetto

Take off the handshower and turn the shower holder as a normal tap

Retirez la douchette et tournez le support de douche comme un robinet normal

03

In questa posizione l'acqua viene aperta e pertanto si può utilizzare la doccetta pulsante

In this position the water is open and you can use the handshower

Dans cette position, l'eau est libre et vous pouvez utiliser la douchette

04

A fine utilizzo per poter riposizionare la doccetta nel supporto bisogna obbligatoriamente riportare lo stesso in posizione verticale chiudendo l'erogazione dell'acqua

After use... To put the handshower in the shower holder you are obliged to close the water

Après utilisation... Pour mettre la douchette dans le porte-douche, vous devez fermer le robinet d'eau.

PROVA DI TENUTA STATICA

COMPONENTE IN PROVA: Raccordo rapido in Genius
 PRODUTTORE: S.G. Via Roma 5, Maurizio d'Opaglio (No)
 ATTREZZATURA DI PROVA: Banco prova idraulico
 MANOMETRO CAMPIONE: Bit 02 0-1000 bar

Esecuzione prova con pressione statica incrementata gradualmente sino al valore di scoppio
 Temperatura ambiente: 20 ±5 °C - Temperatura acqua: 20 ±5 °C

Rif.	Componente	P. scoppio [bar]	Note
002	Raccordo InGenius	745	prova eseguita con acqua a t ambiente salita in pressione graduale

Esito: **positivo**: il valore della pressione di scoppio è nettamente superiore al valore limite normalmente definito quattro volte superiore alla pressione massima operativa

Allegati: report di prova del manometro

Data: 5/12/2013 Operatore: Alberto Giussani

La strumentazione utilizzata per le prove è provvista di dichiarazione di collaudo con riferibilità ai campioni primari Accredia. PAG. 1/2

PROVE DI TENUTA A PRESSIONE PULSANTE

pulsing pressure test

Component under test: raccordo rapido in Genius da 1/2" Gas
 Manufacturer: S.G. Via Roma 5 Maurizio d'Opaglio (No)
 Test bench: Test Bench with acquisition System

Test description: pressure cycles from P1=5 to P2= 50 con frequenza di 1 Hz
 Temperatur ambient: 20 ± 2 C - Water Temperature 15 ± 2 °C

Rif.	Component	N° CYCLES	Note
001	raccordo rapido	100+100+100	Sequence of 3 test cycles
002	raccordo rapido	100+100+100	Sequence of 3 test cycles
002	raccordo rapido con Inverso inserito	100+100+100	Sequence of 3 test cycles

Result: **positive** no leaks during the test
 Note: The component N° 2 has been tested at max. pressure up to the burst limit at 745 bar
 attached: test reports

Data: 5/12/2013 Operatore: Alberto Giussani

The instrumentation used for the test is with calibration reports with reference to official national standard ACCREDIA. PAG. 2/2
